I know we make a lot of fun of tumblr but it did create a whole generation of young teenage girls who self taught themselves HTML and JavaScript just to make Destiel theme smut blogs or Harry Potter fan accounts or whatever and in my opinion that is pretty rad

What is End-User Programming?

The key to understanding non-programmers' interaction with computers is to recognize that non-programmers are not simply under-skilled programmers who need assistance learning the complexities of programming. Rather, *they are not programmers at all*. They are business professionals or scientists or other kinds of **domain specialists** whose jobs involve computational tasks.

— Nardi et al.

End-user programming is done by a motivated power user who may or may not be a professional programmer, **modifying** or creating small ad-hoc tools for their own use or perhaps to share with a handful of **colleagues**.

— Ink & Switch

We then define *end-user programming* as “programming to achieve the **result** of a program primarily for personal, rather public use.”

— Ko et al.

Our Definition

End-user programmers are **domain specialists** that **modify** or create programs to achieve the **result** of a program for their own use or to share with a handful of **colleagues**.

Scientific Work

jupyter Quickstart_Example (unsaved changes)

File Edit View Insert Cell Kernel Widgets Help Trusted Python 3

Download GitHub Binder

Memory: 197 / 2048 MB

```
In [25]: import matplotlib.pyplot as plt
```

```
In [27]: # Temperature vs. Depth
ax = plt.scatter(x=data['Temperature'], y=data['Depth'], c=data['Salinity']);
plt.gca().invert_yaxis(); # Flip the y-axis
plt.colorbar(label='Salinity')
plt.xlabel('Temperature (C)')
plt.ylabel('Depth (m)');
```

Also Scientific Work

$$\Rightarrow \text{acc}^n |\vec{a}| = \lim_{\Delta t \rightarrow 0} \frac{|\Delta \vec{v}|}{\Delta t}$$

$$\begin{aligned} \text{from ①, } |\vec{a}| &= \lim_{\Delta t \rightarrow 0} \frac{v}{R} \frac{|\Delta \vec{r}|}{\Delta t} \\ &= \frac{v}{R} \lim_{\Delta t \rightarrow 0} \frac{|\Delta \vec{r}|}{\Delta t} \quad \text{--- ②} \end{aligned}$$

for small Δt , θ is also small

$$\Rightarrow \text{arc PP}' \cong |\Delta \vec{r}|$$

$$v \Delta t \cong |\Delta \vec{r}|$$

$$\Rightarrow \frac{|\Delta \vec{r}|}{\Delta t} \cong v \quad \text{--- ③}$$

hence put in ② in ②

$$\Rightarrow |\vec{a}| = \left(\frac{v}{R}\right)v \quad \boxed{= \frac{v^2}{R}} \quad \text{PROVED}$$

Direction:

avg accⁿ is directed along $\Delta \vec{v}$

$$\because \Delta \vec{v} \perp \Delta \vec{r} \quad \therefore (\vec{a}) \perp \Delta \vec{r}$$

$\therefore \vec{a}$ always points towards centre
(from diagram)

\Rightarrow dirⁿ of accⁿ avg is towards centre

Jupyter Notebook

Computational tools & practices limit what scientists can express

“I think one of our big issues is how [large predatory fish like tuna and sharks] spend so much time at depth that ideally we want a cool way to show their tracks at depth and how they’re interacting with oceanographic variables throughout the actual tracks that they’re taking”

Scientific Programming

- **Many reasons to code:** Design RNA structures (Nouwens et al.), model climate data (Ziegler et al.), analyze ecology data (Brousil et al.)
- **But, aren't formally taught:** Little instruction, and instead learn from peers or through self-study (Hannay et al.)
- → **Disempowerment:** Variety of languages, debugging difficult (Nouwens et al.)
- + **Steep learning curve:** Tools and languages are technically complex (Berger et al.)

"I don't have much of a computer science background..." [and]

"I'm supposed to be an expert in too many things."

“[figures] generate buzz”

Prototype Review Excerpt, July 2025

To the scientists, the output is more important than the code itself.

Hmm... That is not what I thought it would be...

but maybe...

They use output like charts to confirm their expectations and to communicate their findings.

Interview/Observation/Code Review Excerpt, October 2023

- easier way to make website w. interactive figures that could be included in a paper → would also be cool if at some point journals allow you to include animated and/or interactive figures within the paper itself since most people nowadays read papers online
 - x websites are becoming more common to show fisheries data
- for sharing between workshops, more streamlined ways of creating shared notebooks where people could give you specific feedback (kinda like a google doc)

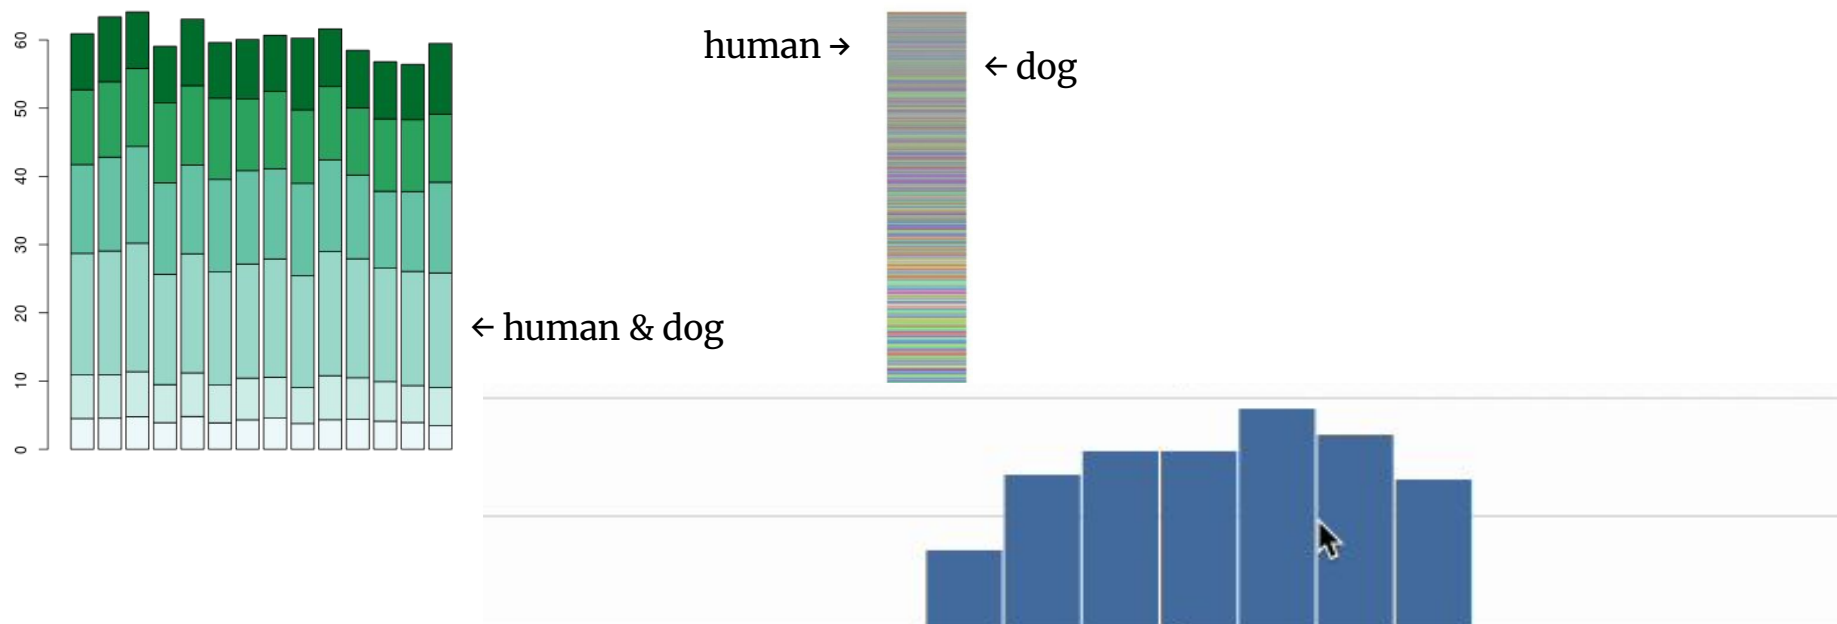

- easier way to make website with interactive figures that could be included in a paper → would also be cool if at some point journals allow you to include animated and/or interactive figures within the paper itself since most people nowadays read papers online
 - websites are becoming more common to show fisheries data
- for sharing between colleagues, more streamlined ways of creating shared notebooks where people could give you specific feedback (kind of like a google doc)

“It would be really cool to have an interactive component where people could, when you’re reading a paper, zoom in on a graph, click the points and stuff. I think that would solve a lot of the issues, either with the volume of data that we have, or the nuance of each data point that you lose in the 2D printed version that they’re still publishing”

“[Plotting] at a higher taxonomic rate like phylum or class... would put me and my dog in the same color and we know that me and my dog have different niches... I don't want to lose my fine grained data at the taxonomy level”

“[Plotting] at a higher taxonomic rate like phylum or class... would put me and my dog in the same color and we know that me and my dog have different niches... I don't want to lose my fine grained data at the taxonomy level”

What is interactivity?

Plant Watering Tracker

Potluck

Plants

- 🌱 Fiddle leaf: every 6 days, last watered on 8/19/2022 
- 🌱 Montsera: every 4 days, last watered on 8/21/2022 
- 🌱 Yuzu tree: every 5 days, last watered on 8/17/2022 
- The Yuzu tree needs some holes in the pot so that water can drain.
- 🌱 Pine Bonsai: every 4 days, last watered on 8/19/2022 

Premise

Ten Brighter Ideas

Suppose 85% of US households always turned off lights in unoccupied rooms.

Result

This would save **41.8 TWh** per year.

CREDITS

“...more-rapid comprehension, better comprehension, the possibility of gaining a useful degree of comprehension in a situation that previously was too complex, speedier solutions, better solutions, and the possibility of finding solutions to problems that before seemed insoluble.”
– Engelbart

“The spectacle metaphor of instruments is replaced by a metaphor where the instruments become a material playground that provides us with a way to learn a lot about the world and about phenomena produced by these instruments. Observation as a source of empirical knowledge is extended to include doing, by interacting and intervening with the world through our instruments.” – *Boon*

What about Zooming in on the San Francisco Bay?

So what can we do?

How can we give scientists the ability to create interactive elements that they could potentially then use to enhance their analysis, communication or other work activities?

What do you think?

So what can we do?

We can provide scientists training...

So what can we do?

We can provide scientists training...

Or dedicated staff...

“There’s a person in our lab, she set it up so that we can run R through the terminal.” *Prototype Review*, July 2025

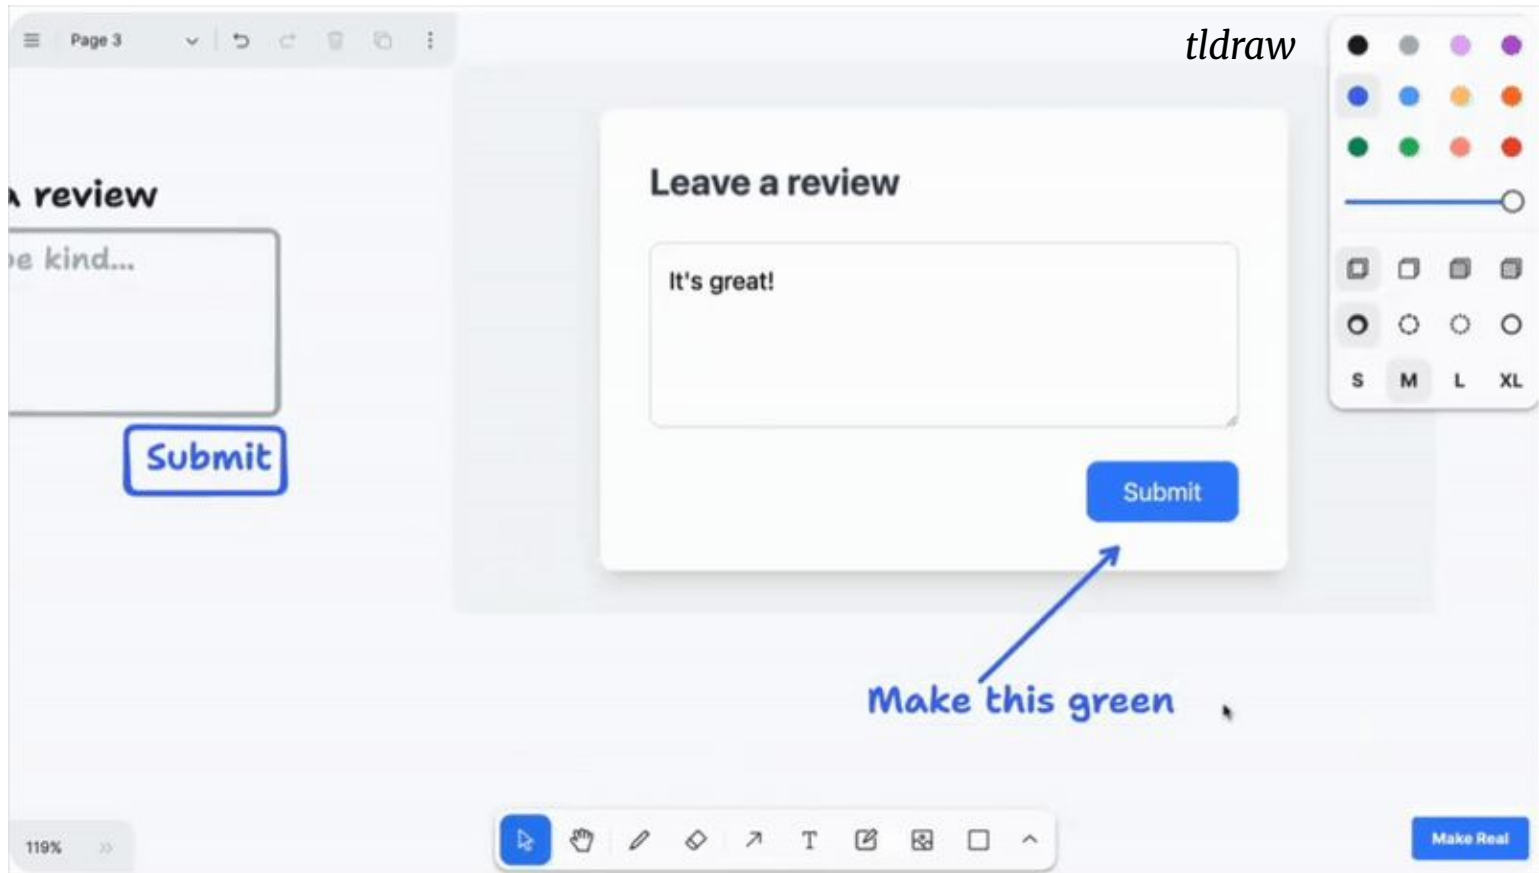

Society of Research Software Engineering

So what can we do?

We can provide scientists training...

Or dedicated staff...

Or improve tooling

“What is the best way to display data? Should I separate it... How do I know which [visualization] to pick?”

“Sometimes [visualizing data] can be very overwhelming. What do we include? How do I group things?”

Workshop Excerpt, February 2025

Here is the R code that performs these steps:

R

 Copy code

```
# Load required libraries
library(osmdata)
library(mapview)

# Get the bounding box for Pittsburgh
pittsburgh_bbox <- getbb("Pittsburgh, Pennsylvania, USA")

# Create an Overpass query for pharmacies in Pittsburgh
query <- opq(bbox = pittsburgh_bbox) %>%
  add_osm_feature(key = "amenity", value = "pharmacy")

# Extract the data as an sf object
pharmacies_sf <- osmdata_sf(query)

# Visualize the pharmacies on a map
mapview(pharmacies_sf$osm_points, zcol = "name")
```

Vibe coding with AI agents is not for scientists

RSTATS

GENAI

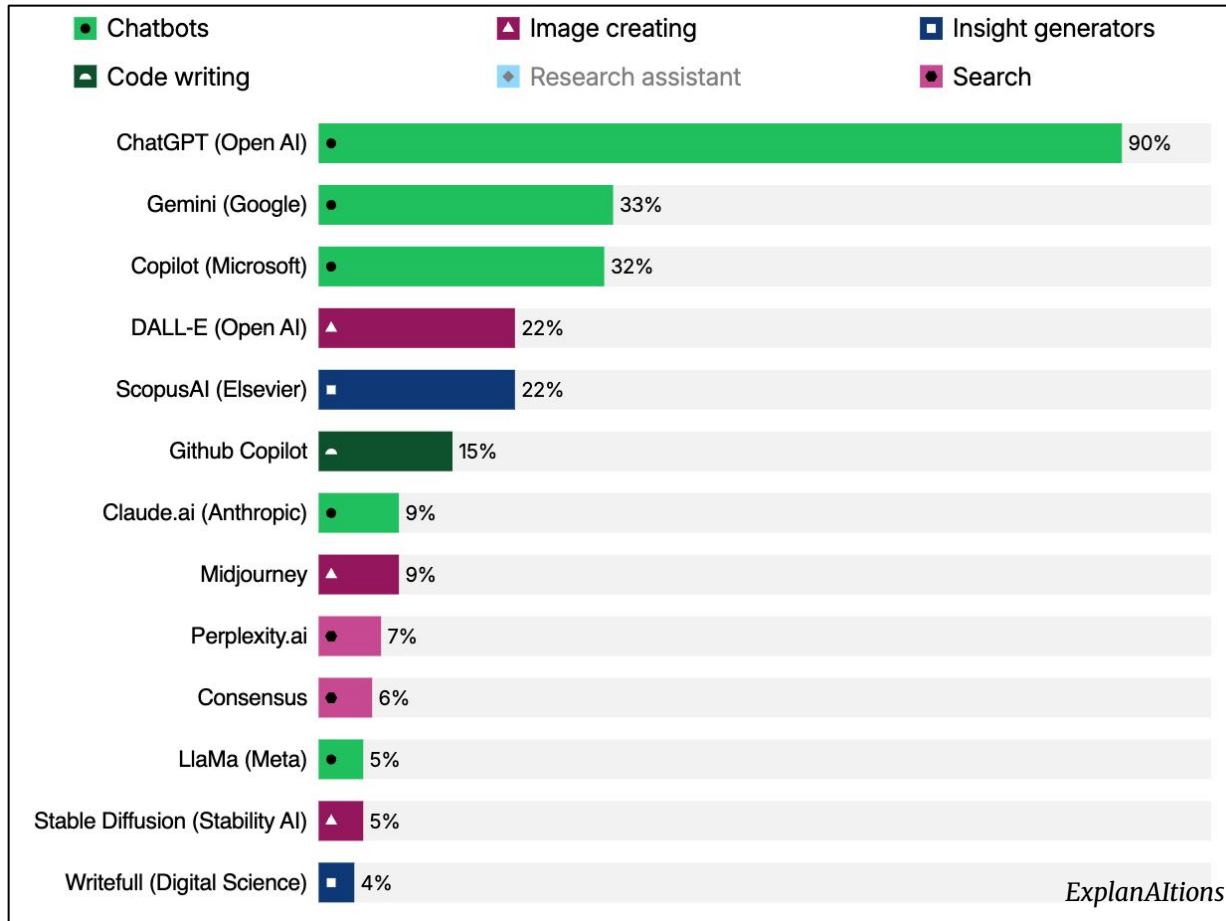

What do you think?

Based on a 2024 survey of researchers, which AI tool is most commonly used?

- ☐ Github Copilot (code)
- ☐ Midjourney (images)
- ☐ ChatGPT

Join at menti.com | use code 8626 0629

How does scientific work change when
scientists author interactive elements?

```
[10]: from matplotlib import pyplot as plt
import numpy as np

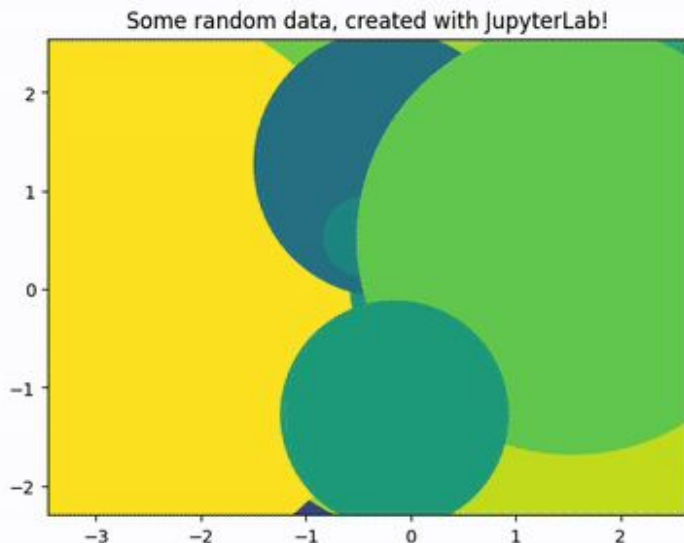

x, y, scale = np.random.randn(3, 100)

fig, ax = plt.subplots()

#ADJUST THIS VALUE
size=50000

ax.scatter(x=x, y=y, c=scale, s=np.abs(scale)*size)
ax.set(title="Some random data, created with JupyterLab!")
plt.show()
```

Jupyter Notebook

Defining Interactivity

Premise

Ten Brighter Ideas

Suppose 85% of US households always turned off lights in unoccupied rooms.

Result

This would save **41.8 TWh** per year.

- Ease of creation
- Ease of using
- Fossilized
- Malleable
